DETAILED ACTION

Response to Amendment

Receipt of the Amendment, filed on January 21, 2009, is acknowledged.

Cancellation of claims 8 and 10 has been entered.

Claims 1-7, 9, 11 and 12 are pending in the instant application.

Allowable Subject Matter

Claims 1-7, 9, 11 and 12 are allowed over the prior art of record.

The following is an examiner's statement of reasons for allowance:

Regarding claim 1, the references of the Prior Art of record fails to teach or suggest the combination of the limitations as set forth in claim 1, and specifically comprising the limitation of a switchable reflector positioned behind the color converting substance such that the color converting substance is between the reflector and the light source, the color conversion cell being shiftable between at least a first state wherein the reflector will at least substantially reflect source light incident on the cell. and the color converting substance will absorb a first ratio, A1, of light incident on the cell, emit light with the second emission spectrum, and transmit a second ratio, T1, of light incident on the cell, and a second state wherein the reflector will at least substantially transmit source light incident on the cell. and the first ratio, A2, is smaller than in the first state and wherein the second ratio, T2, is larger than in the first state.

Regarding claims 2-7, claims 2-7 are allowable for the reasons given in claim 1 because of their dependency status from claim 1.

Regarding claim 9, the references of the Prior Art of record fails to teach or suggest the combination of the limitations as set forth in claim 9, and specifically comprising the limitation of a switchable reflector positioned behind the color converting substance such that the color

converting substance is between the reflector and the light source, forming a switchable resonance structure for the first emission spectrum, the color converting substance having a second emission spectrum different from the first emission spectrum, the color conversion cell being shiftable between at least a first state wherein the reflector will at least substantially reflect source light incident on the cell, and the color converting substance will absorb a first ratio, A_1 , of light incident on the cell, emit light with the second emission spectrum, and transmit a second ratio, T_1 , of light incident on the cell, and a second state wherein the reflector will at least substantially transmit source light incident on the cell, the first ratio, A_2 , is smaller than in the first state and wherein the second ratio, T_2 , is larger than in the first state.

Regarding claim 11, claim 11 is allowable for the reasons given in claim 9 because of its dependency status from claim 9.

Regarding claim 12, the references of the Prior Art of record fails to teach or suggest the combination of the limitations as set forth in claim 12, and specifically comprising the limitation of a switchable reflector positioned behind the color converting substance such that the color converting substance is between the reflector and the light source, forming a switchable resonance structure for the first emission spectrum, and adjusting a voltage between the two electrodes to switch on or off the resonance structure, thereby to increase or decrease the amount of source light absorbed by the color converting substance and the amount of light with a second emission spectrum emitted by the color converting substance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
